Claims 1-37 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1,16,24 and 37, it is not clear from the claim language as to what structure is being claimed. Simply reciting a shell with an upper portion, a curved portion and a seat portion is vague and unclear as to the invention being claimed. It is suggested that the claims specify "a ceramic *seat* shell *for protecting an occupant*, comprising an upper *backrest* portion", or the like, for clarity.

In claims 12 and 33, there is no function or purpose attributed to the "cut-out". The same applies to "at least one groove", in claims 14 and 28, and the "enclosed area", in claims 15 and 32.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-37, so far as definite, are rejected under 35 U.S.C. 103(a) as being unpatentable over Eggert in view of either Barbaza et al or Yavin.

Eggert (figs. 1,2,4) discloses an armored seat that is formed of a single piece of armored plate, and is curved at its backrest, seat and middle joining portions.

While the material of the shell is not specified, the patents to Barbaza et al (fig. 1)

Art Unit: 3636

and Yavin (col. 3, lines 9-26) teach formation of armor plate from ceramic material, and also disclose that the ceramic material may be formed with curved portions (Barbaza et al col. 4, lines 30,31).

In view of the above teachings, it would have been obvious to one with ordinary skill in the art to have formed the one piece armor shell of Eggert from a ceramic material, thereby providing the additional ballistic absorbing advantages of such material. The resulting shell would meet the joined, curved, monolithically formed, continuous limitations set forth in the claims. In regards to the cut-out and groove, the utilization of such for securing the shell to a supporting vehicle frame, would be conventional and are not considered to be patentable distinctions. Note also that a conventional padding material that is secured to the shell for comfort purposes, would provide the "composite bucket", as claimed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Cook, Hauck, Fitch, Lavergne, and Grohs et al show various features of the invention.
